

About: The sourcing team is responsible for finding vendor quotes and organizing that information in order to create an informed price range for materials needed in the tiny house project.

General Meeting #3: the sourcing team had a light round of introductions and discussed preliminary methods and resources to explore for price quotes. January 28th was set as a deadline by which to have a series of price ranges for doors, windows, and a sink. An excel spreadsheet would be created to document sourcing materials.

FAQ

Q: Are new, used, or repurposed items accepted?

A: Yes, all of these are acceptable as building materials as long as they can be used for their intended purpose. Please note that material storage is not possible at the moment, of course there are a few exceptions.

Q: Where can I store all the materials for the build?

A: Currently RPGA Studio cannot store any materials found or donated. The tiny house project build will take place in May. This means materials will be needed as building happens, of course there are a few exceptions.

Q: What are the exceptions to materials that can be stored at the moment?

A: RPGA Studio can store windows as long as they meet some predetermined criteria, however, please contact the sourcing team coordinator at joel.rpgastudio@gmail.com
In the event that a large amount of useful materials can be sourced, rental storage may be a solution for RPGA Studio if sourcing proves to be financially beneficial.

Q: Are sourcing sponsors able to get marketing within the project?

A: Generally, RPGA Studio will try its best to market sourcing sponsors where relevant and within reason. Businesses or individuals who can donate to the project will be noted on printed, and web marketing.

Q: Is the Tiny House Project able to make purchases tax free for sourced materials?

A: Yes, the Tiny House Project is a project under RPGA Studio. As a non-profit organization, RPGA Studio can provide a tax ID number upon payment of materials.

Q: Will the tiny house be outdoors?

A: Yes, the tiny house will be outdoors. The build will also take place outdoors. Currently, it will be built and housed at knockdown center.
